EDUCATION

University of Debrecen

BSc in Computer Science

Debrecen, Hungary

2022 - 2026

EXPERIENCE

Automation & Backend Developer Intern

Reflexshop

2025 - Present

Debrecen, Hungary

- Designed and maintained a fully automated **n8n-based** product enrichment pipeline that processes **20,000+ products daily**, reducing manual work by **90%** and ensuring consistent, high-quality product data.
- Developed and documented **REST APIs** and internal business applications in Python to support automation, reporting, and data management.
- Built advanced n8n workflows integrating **OpenAI** and **Gemini APIs** for product data enrichment, content generation, image creation, and data classification.
- Developed multiple customer-facing websites to improve user experience and support after-purchase needs:
 - **A game replacement support website** where customers can easily request replacements for lost or missing items.
 - **A coupon generator website** for stores, enabling staff to quickly generate and issue coupons to customers in person.
- Integrated multiple **third-party REST APIs**, **PostgreSQL** databases, and **AI services** into production systems, improving data quality, automation, and operational efficiency.

PROJECTS

Self-Hosted Cloud Storage Platform

2025 - 2026

Technologies: Raspberry Pi, Linux, Docker, SSD Storage, Cloudflare

- Built and deployed a secure file storage platform on Raspberry Pi using Docker and SSD storage.
- Developed a web interface for file management, sharing, and access control.
- Exposed the service securely to the public internet using Cloudflare Tunnel and custom domain.
- Managed Linux services, networking, and storage infrastructure for high availability.

Smart Chicken Incubator

2024 - 2025

Technologies: Raspberry Pi, Python, Kotlin, Jetpack Compose, Sensors, Relays

- Designed and built a Raspberry Pi-based embedded system for automated egg incubation.
- Implemented temperature and humidity monitoring and environmental control.
- Developed an Android application using Kotlin and Jetpack Compose for remote monitoring, configuration, and notifications.
- Enabled full remote management and real-time status tracking.

Full-Stack Web Application

2024

Technologies: React, TypeScript, Flask, Supabase, PostgreSQL

- Developed a full-stack web application with React + TypeScript frontend and Flask backend.
- Implemented user authentication, role-based access control, and protected API endpoints.
- Built responsive UI components and integrated Supabase (PostgreSQL) for data persistence.
- Deployed the application with secure API communication and environment configuration.

TECHNICAL SKILLS

Languages:	Python, Java, TypeScript, JavaScript, Kotlin
Frontend:	React, TypeScript, HTML, CSS
Backend:	Python, Flask, REST APIs
Databases:	PostgreSQL, Supabase
AI & Automation:	n8n, OpenAI API, Gemini API
Infrastructure:	Linux, Docker, Raspberry Pi, Cloudflare
Tools & Platforms:	Git, GitHub, Postman
Other:	Android (Kotlin, Jetpack Compose)

TOOLS & TECHNOLOGIES

Tools:	Git, Docker, Postman
Platforms & Services:	GitHub, Supabase, Cloudflare
